ABSTRACT

A drug for topically administration which is effective as an antiallergic agent. The drug for topically administration contains as an active ingredient an adenine compound represented by the general formula (1):

$$Q^{1-Y^{1}}X^{1}$$
 X^{1} X

[wherein ring A represents a 6 to 10 membered, mono or bicyclic, aromatic hydrocarbon or a 5 to 10 membered, mono or bicyclic, aromatic heterocycle containing one to three heteroatoms selected among 0 to 2 nitrogen atoms, 0 or 1 oxygen atom, and 0 or 1 sulfur atom; n is an integer of 0 to 2; m is an integer of 0 to 2; R represents halogeno, (un)substituted alkyl, etc.; X¹ represents oxygen, sulfur, NR¹ (R¹ represents hydrogen or alkyl), or a single bond; Y¹ represents a single bond, alkylene, etc.; Y² represents a single bond, alkylene, etc.; Z represents alkylene; and at least one of Q¹ and Q² represents -COOR¹0 (wherein R¹0 represents (un)substituted alkyl, etc.), etc.] or a pharmaceutically acceptable salt of the compound.
